System
Laser
Laser output

Compact disc digital audio system
Semiconductor laser ($\lambda=780$ nm)
Max. $44.6 \mu\text{W}^*$
* This output is the value measured at a distance of about 200 mm from the objective lens surface on the Optical Pick-up Block.

Spindle speed
Error correction

200 r.p.m. to 500 r.p.m. (CLV)
Sony Super Strategy Cross Interleave Reed Solomon Code 2

Number of channels
D-A conversion
Frequency response
Dynamic range
Harmonic distortion
Wow and flutter

16-bit linear
2 Hz–20,000 Hz (± 0.5 dB)
More than 94 dB
Less than 0.005%
Below measurable limit

Amplifier section

System
Maximum power output

Quasi-complementary SEPP
35 W + 35 W at 8 ohms
Woofer: 60 W at 8 ohms
Less than 0.03%
10 Hz–50 kHz ± 0.5 dB (TAPE)
150 mV/50 k Ω (TAPE)
BASS ± 8 dB (100 Hz)
TREBLE ± 8 dB (10 kHz)

Harmonic distortion
Frequency response
Sensitivity
Tone control

Tuner section

System

Superheterodyne tuner
Quartz-locked digital synthesizer

Tuning range

FM: 87.5–108 MHz
AM: 531–1,602 kHz (with the AM tuning interval set at 9 kHz)

Antenna

FM: 75 ohms
AM: AM loop antenna

Usable sensitivity

FM: 11.5 dBf (IHF)
AM: 250 $\mu\text{V/m}$

Signal-to-noise ratio

FM: 75 dB (stereo), 80 dB (mono)
AM: 50 dB

BESKYTTELSE AF ØJNE MOD LASERSTRÅLING UNDER SERVICE

I dette apparat anvendes laserlys. Derfor skal nedenstående instruktioner nøje følges under service.

Følg iøvrigt instruktionerne i servicemanualen.

ADVARSEL!!

Under service må øjnene ikke komme nær objektiv-linsen på den optiske pick-up enhed. I tilfælde af at det er nødvendigt at kontrollere udsendelsen af laserlys, skal det ske i en afstand af mere end 25 cm fra den optiske pick-up.

1. Laser-diode data

- Materiale: GaAlAs
- Bølgelængde: 780 nm
- Udstråling: Kontinuerlig
- Laseroutput: Max. 0,4 mW*
 - * Målt i 1,6 mm afstand fra overfladen af objektiv-linsen på den optiske pick-up enhed.
- Klassifikation: Klasse IIIb.

2. Adskil aldrig den optiske pick-up enhed under service, og juster ikke APC kredsløbet (Automatic Power Control). Hvis APC kredsløbet (incl. laser-dioden) bryder ned, skal hele den optiske pick-up enhed (incl. APC printkortet) udskiftes.

LASER ADVARSEL MÆRKNING

Følgende mærkning findes indvendig i apparatet:

1. Advarsel Mærkning

VAROITUS: Laite sisältää, laserdiodin, joka lähettää (näkyvätöntä) silmille vaarallista lasersäteilyä.

NOTES ON HANDLING THE OPTICAL PICK-UP BLOCK OR BASE UNIT

The laser diode in the optical pick-up block may suffer electrostatic breakdown because of the potential difference generated by the charged electrostatic load, etc. on clothing and the human body.

During repair, pay attention to electrostatic breakdown and also use the procedure in the printed matter which is included in the repair parts.

The flexible board is easily damaged and should be handled with care.

SAFETY-RELATED COMPONENT WARNING!!

COMPONENTS IDENTIFIED BY SHADING AND MARK  ON THE SCHEMATIC DIAGRAMS AND IN THE PARTS LIST ARE CRITICAL TO SAFE OPERATION. REPLACE THESE COMPONENTS WITH SONY PARTS WHOSE PART NUMBERS APPEAR AS SHOWN IN THIS MANUAL OR IN SUPPLEMENTS PUBLISHED BY SONY.

SECTION 1 SERVICING NOTES

1-1. CAUTIONS ON CONFIRMING THE LASER DIODE'S OPERATION

The laser light from this unit is focused on the reflective surface of a disk through an objective lens in the optical block. When confirming the laser diode's operation, stay at least 30cm from the objective lens.

1-2. CONFIRMING THE LASER DIODE AND FOCUS SEARCH OPERATION

Remove the chucking arm and turn the power switch on. Check for the operation in the figure below through the objective lens. (The optical block should be in the innermost circumference.)

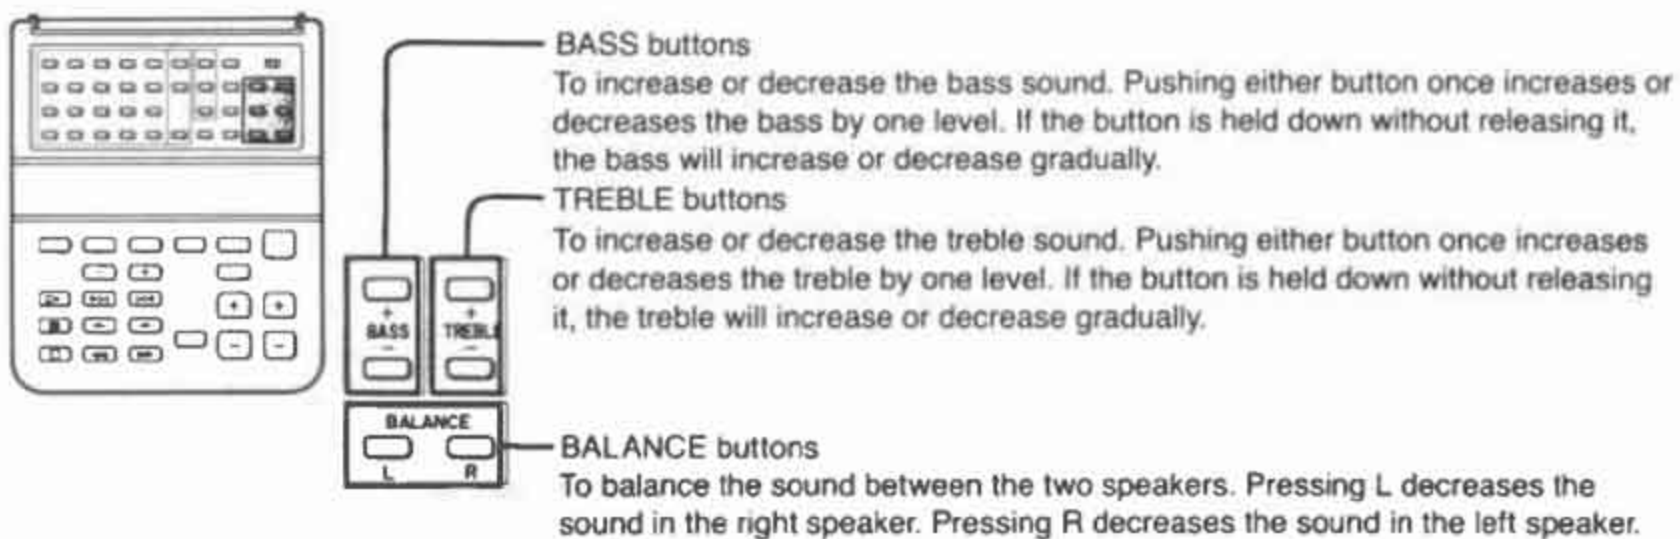

SECTION 2 GENERAL

2-1. LOCATION AND FUNCTION OF CONTROLS

Main Unit

Remote Commander—General

For details, on the function of each button, refer to the pages indicated in ●

CD controls

Tuner controls

CD controls

Tuner controls

2-2. USING THE SURROUND FEATURES

The Surround System can be used only while playing a CD and may be set for either a large or small room (see illustrations below). The Surround system can be adjusted to suit your particular room in the following ways:

1. Press SURROUND S or L.

To set the system for a small room, press S. This surround mode is most effective when listening to solo performances or background music. **(A)**

To set the system for a large room, press L. This Surround mode is most effective for listening to group performances such as orchestras or choirs. **(B)**

A

B

2. Pressing the + or - button increases or decreases the surround effect.

Pressing the button once and releasing it increases or decreases the surround effect by one level. If the button is pressed down and not released, the effect will increase or decrease gradually until the maximum or minimum level has been reached.

The High Definition Compact Disc System is designed to let you enjoy concert hall-like sound in your own home. This is accomplished by Sony's unique Surround System which takes the excellent sound produced by a CD disc and reflects it from the walls, ceiling and floor of your room, creating the sensation that you are completely immersed in sound. This is especially effective for listening to high quality musical recordings.

Surround Tips

- While the + or - button is being pressed, the surround indicator will flicker, but stops when the maximum or minimum level has been reached.
- Setting the Surround system at a very high level causes distortion in the sound.
- Music and other sounds which have been recorded at a low volume require a higher level of surround effect.

2-3. RADIO RECEPTION

The CDZ-1 system is also equipped with an AM/FM radio. Stations can be tuned in in the following ways:

Tuning manually

1. Set the TUNER/CD selector (inside the lid of the remote commander) to TUNER.
2. Press TUNER.
3. Select the desire band with the AM/FM band selectors.
4. Press the numeric buttons which correspond to the station you want.
Example: AM 1350 kHz 1 3 5 0
FM 108.00 MHz 1 0 8 0 0
5. Adjust the volume.

If you pressed the wrong numeric button while tuning in a frequency

Begin with step 2 above again. Select FM or AM with the band selectors, then press the numeric buttons which correspond to the frequency you want.

If FM or AM is not selected

The station which has been preset on the number you press will automatically be tuned in.

When entering AM frequencies

Since the AM tuning interval is preset to 10 kHz (USA) or 9 kHz (European countries) the tuner will automatically tune in to the 10 kHz or 9 kHz interval which is closest to the number you have entered. For example, if you want to listen to station 1348 kHz, the tuner will tune in to 1350 kHz.

Scanning for stations (FM only)

1. Press the FM.
2. Press either + or - TUNING inside the lid of the remote commander. Pressing + will set the tuner to scan for higher frequencies and pressing - will set it to scan for lower frequencies. Once + or - has been entered, scanning will automatically start. When a station has been found, it is tuned in and will remain tuned in for 3 seconds.
3. If you would like the tuner to remain on a station press MEMORY.
4. Adjust the volume.

Retaining a station in memory

- A total of 10 FM/AM stations can be memorized in any desired order.
1. Tune in the desired station (see page 7 for exact instructions).
 2. Press MEMORY. The memory indicator will appear for 3 seconds in the display window.
 3. During the 3 seconds that the memory indicator (—) is lit, press the numeric button (0 to 9) which corresponds to the position you want that station to occupy in the remembered order.
 4. Repeat the above procedure for each of the stations you want memorized.

If the memory indicator goes off before you have entered the position number, press MEMORY again and enter the number when the indicator appears again.

Tuning in a memorized station

1. Simply press the desired numeric button.
2. To switch to the other memorized stations, press TUNING + for selecting the higher numeric buttons or TUNING - to select the lower numeric buttons.

While scanning
If the strength of the signal is weak or there is a lot of static, the tuner will not stop at that frequency. If you would like to hear a frequency which the tuner does not tune in automatically, it is necessary to return to the manual mode (see page 7).

Moving a preset station to another numeric button

1. Press the numeric button to be changed.
2. Press MEMORY.
3. Press the numeric button which corresponds to position you want to move the station to.

Note

Once a new station has been memorized on a position, the previously memorized station on that position will be erased.

2-5. CONNECTIONS

Basic Connection

Do's and Don'ts of Connection

- Be sure to connect the red plugs to the right (R) jacks and the white plugs to the left (L) jacks.
- Insert the cable connectors as far as they will go into the connectors. A loose connection can cause hum and other noises.
- Disconnect the cord by grasping the plug and pulling it. Never pull the cord itself.

Connecting Other Equipment

For details on the installation of each piece of extra equipment you want to use, please refer to each equipment's instruction manual.

1 Connecting the Speaker Cords

Approx. 12 mm

Twist the stripped wires into single strands before inserting them into the jacks. Stray wires may cause shorting and damage to the unit.

2 Connecting an Outdoor FM Antenna

For the customers in Europe

An antenna connector is not supplied with your model. Connect a 75-ohm coaxial cable equipped with a commercially available IEC connector.

3 Connecting the AM Loop Antenna

AM programs cannot be received without first connecting the supplied AM antenna.

- The AM loop antenna is designed to pick up signals from a particular direction. Adjust the position of the antenna for optimum reception.
- For areas where it is difficult to obtain good AM reception, connect a 6 to 15 meter (20 to 50 feet) insulated wire to the AM antenna terminal (there is no need to disconnect the supplied AM antenna). Run this wire from the terminal to a place which is outside, keeping the greater portion of the wire horizontal whenever possible.

4 Connecting the Antenna Ground

Hum and other noises may be reduced by adding a grounding wire.

To connect the ground, attach a vinyl-coated wire to the terminal. The other end of the cord should be bare for more than 50cm (19 3/4 inches). Bury it underground, either as it is, or after having connected it to a metal (copper) stick.

WARNING: Be sure to ground against lightning when an external antenna is used. Never connect wires to a gas pipe as an explosion can result.

5 Connecting the AC Power

Connect the AC power cord to a wall outlet, set the main power switch to ON and replace the cover. This switch is normally left ON and the power switch on the remote commander is used to turn the power switch to OFF. Set the main power switch to OFF only if the unit will not be used for an extended period of time.

For the customers in U.S.A.

Note to CATV System Installers: Article 820-22 of the NEC provides guidelines for proper grounding and specifies that the cable ground should be connected to the grounding system of the building, as close to the entry point of the cable as is practical.

SECTION 3 CIRCUIT DESCRIPTION

3-1 DIGITAL SIGNAL PROCESSOR CXD1079Q (IC1101 AND 1102) PIN FUNCTIONS

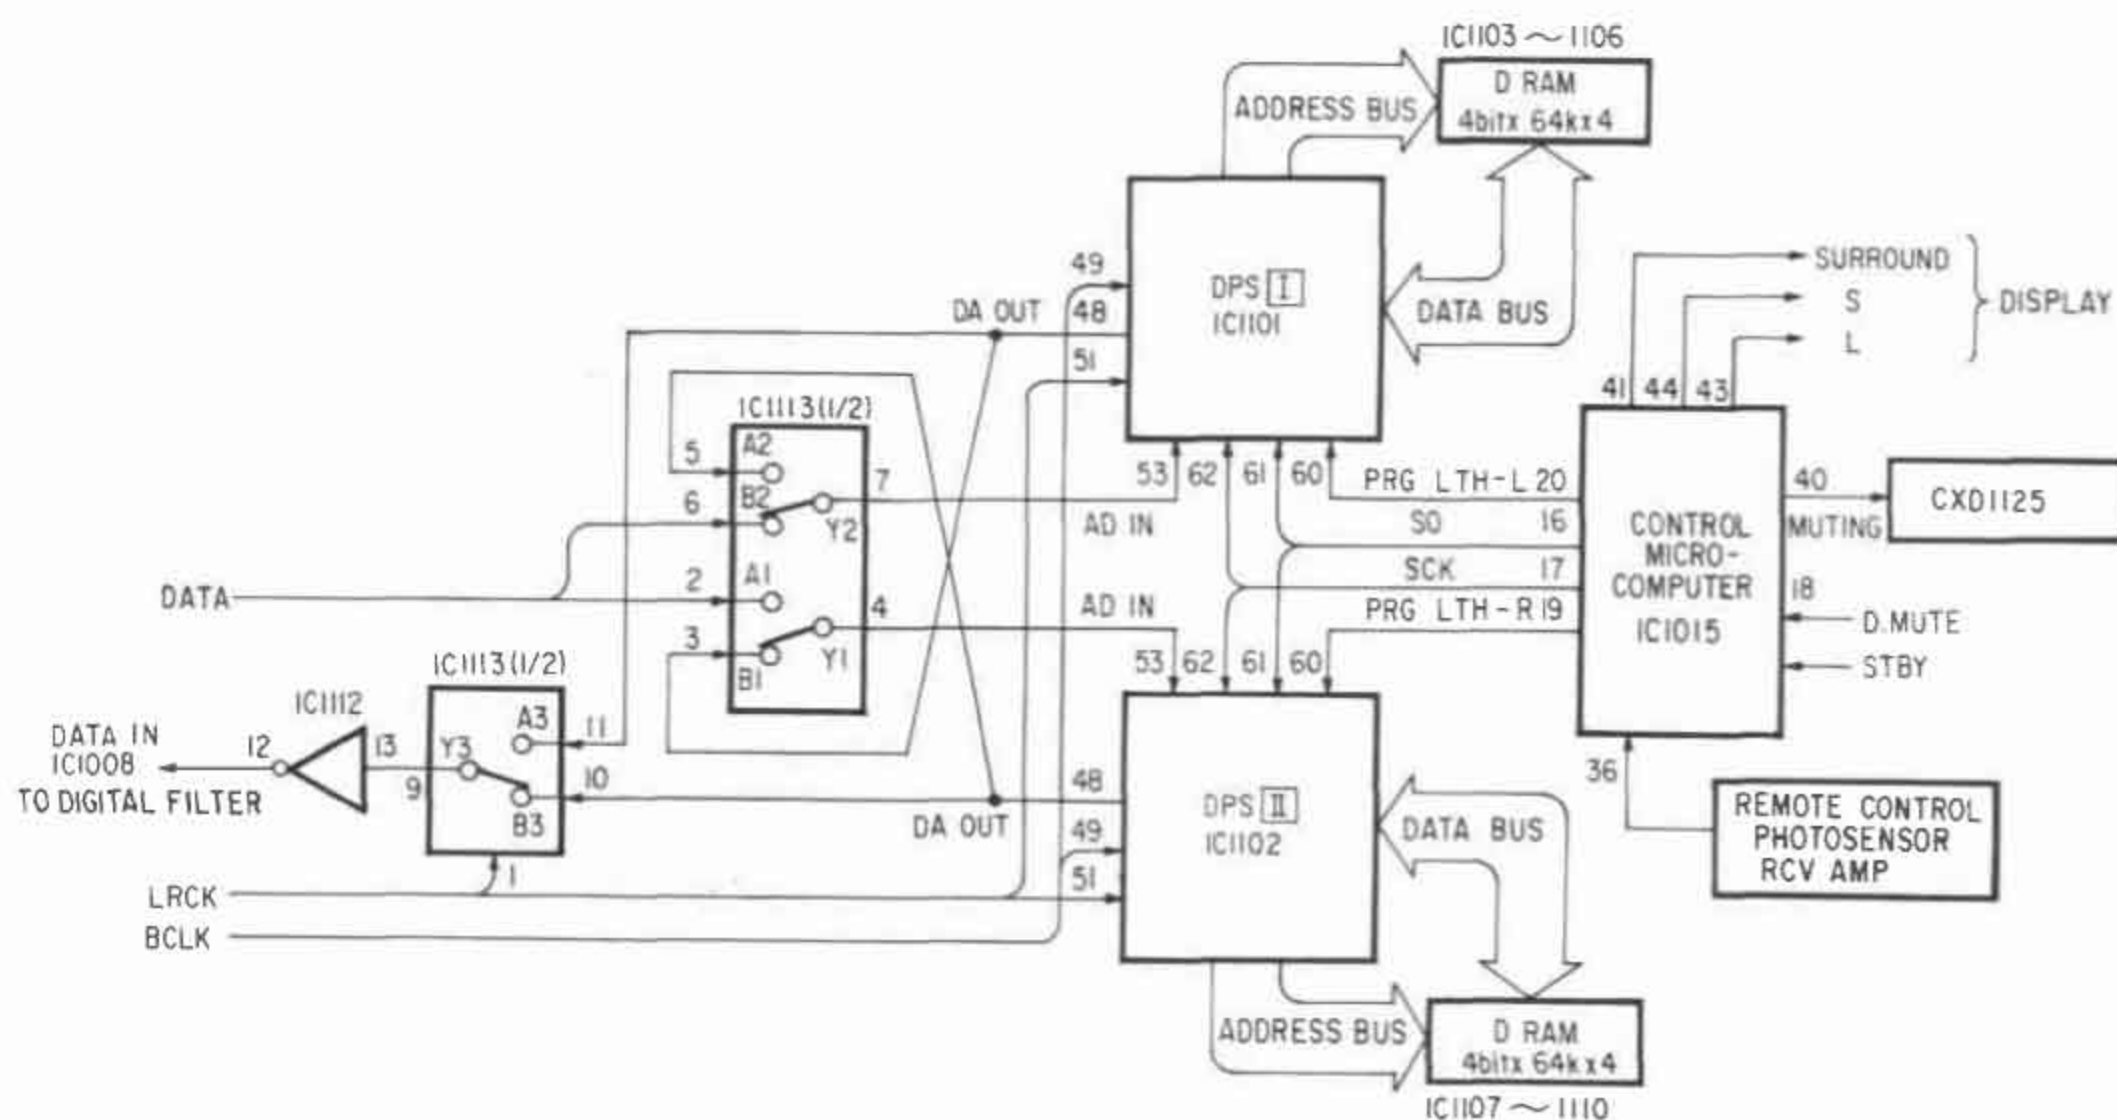

The control program of digital signal processor IC1101 is sent from microcomputer IC1015. This IC converts the signal from the A/D IC (IC1101) from serial to parallel. The converted signal is then sent to the external RAM (consisting of IC1103 through IC1110) and read after the required delay time. The digital analog processor also performs matrix processing or filtering. The resultant signal is sent to the D/A IC (IC1009).

▲ : Not used in CDZ-1.

Pin No.	Terminal	I/O	Description																																																																																					
1	D15	I/O	Input and output of the external RAM and latch data.																																																																																					
2 to 5	$\overline{\text{IN}}\ 0$ to $\overline{\text{IN}}\ 3$	O	16-bit parallel input strobe signal from external latch circuit. "L" active.																																																																																					
6 to 9	$\overline{\text{OUT}}\ 0$ to $\overline{\text{OUT}}\ 3$	O	16-bit parallel output strobe signal sent to external latch circuit. "H" active.																																																																																					
10	D-DIR	O	Direction signal for external latch circuit's bidirectional buffer. The same signal as $\overline{\text{IN}}\ 0$ through $\overline{\text{IN}}\ 3$ is output in the input mode.																																																																																					
11	ADRS-P	O	16-bit parallel port extension signal.																																																																																					
12 to 27	A0 to A15	O	External RAM address output. A0: LSB A0 through A7 are used when the D-RAM is Connected.																																																																																					
28	$\overline{\text{OE}}$	O	External RAM $\overline{\text{OE}}$ signal.																																																																																					
29	$\overline{\text{WE}}$	O	External RAM $\overline{\text{WE}}$ signal.

44	EX-MODE	I	16-bit × 2 serial data transfer mode select pin. "H": The signal at LR-CLK and DAB-CLK terminals is input. "L": The signal at LR-CLK and DAB-CLK terminals is output.																																																																																					

Pin No.	Terminal	I/O	Description
45	VSS	—	Power supply at ground. Shorted externally to pin 80.
46	TEST-CK	I	Test terminal. Set to "L" when this IC is used. Data address counter clock input.
47	TEST-R	I	Test terminal. Set to "L" when this IC is used. Data address counter reset input.
48	DA-OUT	O	16-bit \times 2 serial data output's digital audio stereo signal.
49	DA-BCK	I/O	DA-OUT sending bit clock. The DA-OUT signal data is changed at its trailing edge.
▲ 50	W-CLK	O	Word clock signal.
51	LR-CLK	I	Sampling frequency clock. "H": L-CH is transferred. "L": R-CH is transferred.
▲ 52	ADB-CLK	O	Signal data loading clock output. Data is loaded every bit at its trailing edge.
53	AD-IN	I	16-bit \times 2 serial data input's digital audio stereo signal.
54	NC	—	No connection (floating). Pay attention to the floating capacity between adjacent pins 53 and 55 when connecting the signal line.
▲ 55	DATA-P	O	Outputs "H" during data access.
▲ 56	OVF16	O	Outputs "H" when a 16-bit internal clipper is operated.
▲ 57	OVF22	O	Outputs "H" when 22-bit internal data overflows.
▲ 58	ZERO-P	O	Outputs "H" during zero instruction execution.
59	MUTE	I	DA-OUT is set to "L" and muted. "H" active.
60	$\overline{\text{PRG-LTH}}$	I	Serial input PRG-DT data is sent in parallel to the latch circuit. "L": Transferred. "H": Latched.
61	PRG-DT	I	Microprogram transfer serial data input.
62	PRG-CK	I	Microprogram transfer clock input. PRG-DT data is loaded at the leading edge.
63	F-MODE	I	Inhibits the transfer of a program to RAM and enables data access according to the zero instruction. "H" active.
64	VDD	—	Positive (+) power supplies +4.5V to +5.5V (VSS reference). Shorted externally to pin 32.
65 to 79	D0 to D14	I/O	Input and output of external RAM and latch data.
80	VSS	—	Power supply at ground. Shorted externally to pin 45.

3-2. OUTLINE OF DUAL DPS CONTROL CIRCUIT

3-3. AUDIO SIGNAL FLOW DURING PLAY

- SURROUND OFF : Not Passed through the D RAM.
- SURROUND ON : Passed through the D RAM.

MAIN CHASSIS (1)

- Remove the connector

**MAIN CHASSIS (2)**

ORNAMENT GLASS

Pull the ornament glass upward to remove it.

**Assembling**

- 1) Put both sides at the top of the ornament glass between the spacers.
- 2) Insert the spacers into the cabinet's groove together with the ornament glass as shown in the figure below.

The spacers should not protrude.

Spacers

Details at portion A**CONNECTING DURING INSPECTION**

- 1) To operate the main unit which is removed from the cabinet, put the unit on a working table of approximately 80cm in height because it has a short lead wire.
- 2) Remove the four wiring clips in the cabinet and pull the lead wire out approximately 10cm. (Never pull out it forcefully.)
- 3) Connect the connectors which are removed from translation boards (A) and (B).

Wiring clips

SECTION 5 ADJUSTMENTS

Note: This unit can be completely operated using a remote controller. Use remote commander RM-Z1 to make adjustment.

5-1. TUNER SECTION

Servicing Note

The FM front-end is carefully adjusted at the factory and is supplied as one whole block for replacement.

FM Discriminator Alignment

Setting:

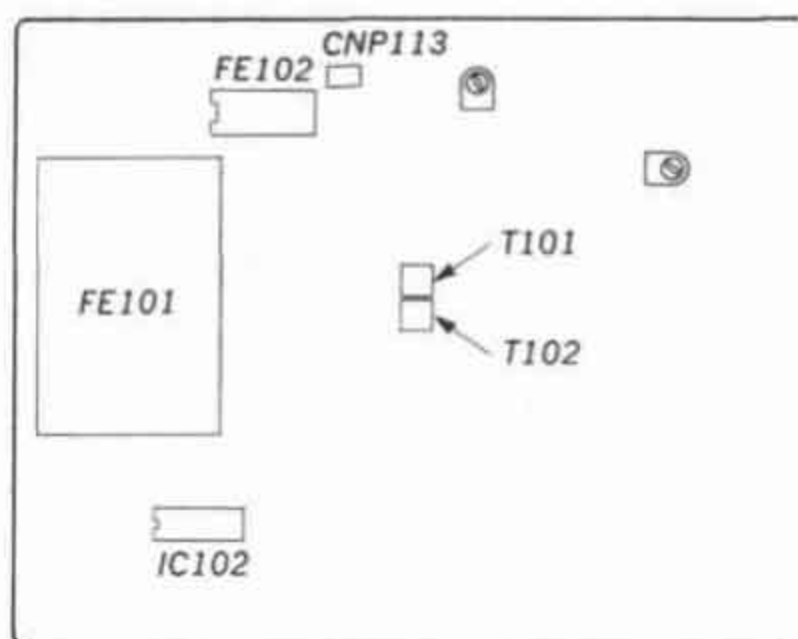

Carrier frequency: 98MHz
Modulation: 1kHz, 75kHz deviation (100%)
Output level: 1mV (60dB)

Procedure:

1. Tune the set 98MHz.
2. The connect CNP113 (NULL test point) with VOM.
3. Adjust the core (primary-side) of T101 for 0V reading on VOM.
4. Adjust the core (secondary-side) of T102 for minimum distortion.

Note: When replacing the ceramic filter, perform this alignment.
Repeat the secondary-side and primary-side alignments several times.

Adjustment Location: tuner board

VCO Adjustment

Procedure:

1. Tune the set to the FM stereo signal.
2. Tune RV101 clockwise or counterclockwise and memorize the lighting-up range of the stereo lamp.
3. Seccure RV101 at the center of the lighting-up range of both turns as shown below.

Adjustment Location: tuner board

FM Stereo Separation Adjustment

Procedure:

Carrier frequency: 98MHz
 Output level: 1mV (60dB)
 Modulation
 Audio 1kHz: 33.75kHz deviation (45%)
 Sub channel 38kHz: 33.75kHz deviation (45%)
 Pilot signal 19kHz: 7.5kHz deviation (10%)

FM stereo signal generator output channel	VTVM connection	VTVM reading (dB)
L-CH	L-CH	Ⓐ
R-CH	L-CH	Ⓑ [ⓑ] Adjust RV102 for minimum reading.
R-CH	R-CH	Ⓒ
L-CH	R-CH	Ⓓ [ⓓ] Adjust RV102 for minimum reading.

L-CH Stereo separation: Ⓐ — Ⓑ

R-CH Stereo separation: Ⓒ — Ⓓ

The separations of both channels should be equal.

Adjustment Location: tuner board

5-2. CD SECTION

1. Perform adjustments in the order given.
2. Use YEDS-18; Part No. 3-702-101-01.
3. Use the oscilloscope with more than 10MΩ impedance.

RF PLL Free Run Frequency Check

Procedure:

1. Short the TP(ASY) point.
2. Press the OPEN/CLOSE button.
3. Check the TP(PLCK) point that the frequency counter reading is 4.3218MHz. If it is not, adjust RV1203 for 4.3218MHz.
4. Release the TP(ASY) point.
5. Put disc (YEDS-18) in and press PLAY button. Confirm that the reading on frequency counter is 4.3218MHz.

Adjustment Location: CD board

E-F Balance Adjustment

This adjustment should be made when replacing TOP (T-type Optical Pick-up).

Procedure:

1. Short the TP (ADJ), TP (TE1) points.
2. Connect oscilloscope to TP (TE0), TP (RF G) points.
3. Turn POWER switch on.
4. Put disc (YEDS-18) in and press ▷ button.
5. Press the ◀◀ FF or ▶▶ REW button.
6. Adjust RV1101 so that the traverse waveform is symmetrical above and below.

Adjustment Location: CD board

Focus Bias Adjustment

This adjustment should be made when replacing TOP (T-type Optical Pick-up).

Procedure:

1. Connect oscilloscope to test points TP (RF) and TP (RF G).
2. Turn POWER switch on.
3. Put disc (YEDS-18) in and press ▷ button.
4. Adjust RV1102 for an optimum waveform eye pattern or so that the peak is maximum. Optimum eye pattern means that shape "◇" can be clearly distinguished at the center of the waveform.

Adjustment Location: CD board

REFERENCE

Focus/Tracking Gain Adjustment

A frequency response analyzer is necessary in order to perform this adjustment exactly.

However, this gain has a margin, so even if it is slightly off, there is no problem. Therefore, do not perform this adjustment.

Focus/tracking gain determines the pick-up followup (vertical and horizontal) relative to mechanical noise and mechanical shock when the 2-axis device operate.

However, as these reciprocate, the adjustment is at the point where both are satisfied.

- When gain is raised, the noise when the 2-axis device operates increases.
- When gain is lowered, mechanical shock and skipping occurs more easily.
- When gain adjustment is off, the symptoms below appear.

Symptoms \ Gain	Focus	Tracking
• The time until music starts becomes longer for STOP → PLAY or automatic selection (⏮, ⏭ buttons pressed.) (Normally takes about 1 seconds.)	low	low or high
• Music does not start and disc continues to rotate for STOP → PLAY or automatic selection. (⏮, ⏭ buttons pressed.)	—	low
• Disc table opens shortly after STOP → PLAY.	low or high	—
• Sound is interrupted during PLAY. Or time counter display stops progressing.	—	low
• More noise during 2-axis device operation.	high	high

The following is a simple adjustment method.

—Primary Adjustment—

Note: Since exact adjustment cannot be performed, remember the positions of the controls before performing the adjustment. If the positions after the primary adjustment are only a little different, return the controls to the original position.

Procedure:

1. Keep the set horizontal.
(If the set is not horizontal, this adjustment cannot be performed due to the gravity against the 2 axis device.)
2. Insert disc (YEDS-18 fifth music) and press ► PLAY button.
3. Connect oscilloscope to CD board TP (FE0).
4. Adjustment RV1201 so that the waveform is as shown in the figure below. (focus gain adjustment)

- Incorrect Examples (DC level changes more than on adjusted waveform)

Connect oscilloscope to CD board TP (TE0).
Adjust RV1202 so that the waveform is as shown in
the figure below. (tracking gain adjustment)

Incorrect Examples (fundamental wave appears)

low tracking gain

high tracking gain
(higher fundamental wave than for low gain)

Adjustment Location: CD board

SECTION 8 ELECTRICAL PARTSLIST

NOTE:

- Due to standardization, replacements in the parts list may be different from the parts specified in the diagrams or the components used on the set.
- Items marked "★" are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.
- If there are two or more same circuits in a set such as a stereophonic machine, only typical circuit parts may be indicated and capacitors and resistors in other same circuits may be omitted.

CAPACITORS:MF: μ F, PF: μ F.**RESISTORS**

- All resistors are in ohms.
- F: nonflammable

COILS

- MMH: mH, UH: μ H

SEMICONDUCTORSIn each case, U: μ , for example:UA...: μ A..., UPA...: μ PA...,UPC...: μ PC, UPD...: μ PD...

The components identified by shading and mark  are critical for safety. Replace only with part number specified.
